## EV CHARGER CABLE COVER

The EV Charger Cable Cover is designed for those who are unable to park their car right next to their nearest power outlet or charger unit to prevent trips and cable damage by foot traffic and vehicles. With a single channel perfect for a standard cable, the yellow and black colours make this highly visible even in low light environments and is often used on footpaths, driveways and vehicle entrances.

The driveway cable protector will cover cables up to 20mm wide, which provides enough room for electrical cables and hosing, with an overall length of 1 metre. Suitable for use by itself or multiple EV Charger cable covers, these can be simply placed over the cable you wish to protect and can be bolted in position for permanent installations (bolts not included).

Manufactured for Vigil Products of a weatherproof heavy-duty rubber, it can also double as a speed bump with a weight limit of at least 5 tonnes to allow cars to pass over. Of course, the one-channel cable cover is versatile for all types of use, including temporary events, retail, office and home use.

Product	EV Charger Cable Cover
Product Code	VP-EVCP1
H x W x D	40x150x990mm
Weight	4.18kg
Channels	Single
Colour	Yellow and Black
Carton Quantity	4
Carton Weight	17.26kg
Carton Dimensions	130x180x100mm
