TELESCOPIC INSPECTION MIRROR WITH LIGHT

The portable inspection mirror with light solves the issue of easily checking difficult to reach or dangerous areas where your vision is obscured without needing to bend or stretch. Used by security guards, police, port security and the armed forces, the mirror allows them to efficiently search cars, lorries, ships, aircraft, buildings, machinery and seating areas with ease. In fact, the inspection mirror is also used for safety checks on machinery too.

With and lightweight design and a castor wheel on the rear of mirror making it easy to glide across the floor, the vehicle inspection mirror has a telescopic handle – with a total length of 1.2 meters – to save your back. The 220mm convex mirror has a tough acrylic construction, gives the user a viewing distance of 2 metres, and comes complete with a battery-operated LED light on the handle to provide uplighting to any dark area by reflecting light from the mirror (3x AAA batteries included).

Manufactured for Vigil Products, the inspection mirror includes a storage bag which is ideal for transporting the mirror and storing away when no longer required to protect the mirror from becoming damaged.

Product	Telescopic Inspection Mirror with Light
Product Code	VP-IM220
H x W x D	4x29x70mm
Weight	0.6kg
Colour	Silver & Black
Material	Lightweight aluminium handle and convex mirror
Carton Quantity	10
Carton Weight	7.34kg
Carton Dimensions	280x470x740mm
